

Ezee Breathe – HEPA Air Purifier **Cleans the Air around You**

Applications

The Ezee Breathe Air Purifier is designed to clean the air in domestic applications where poor air quality is a concern. This small air purifier can be mounted under the bed, or behind the sofa, and has variable speed control allowing for quiet operation or a quick boost for when the air quality is particularly bad.

Using a pre filter and a HEPA filter the Ezee Breathe will remove airborne dust, pollen, tobacco, mould spores, pet dander and other irritant particles from the air, including PM10 and PM2.5. This unit is ideal for use by asthmatics and people with hyper sensitivity or allergies, to reduce their symptoms within a contained environment.

Air filters for reducing gaseous contaminants including VOCs, are available upon request.

Description

The Ezee Breathe Domestic Air Purifier is designed to be run 24 hours a day, and has a variable speed fan to facilitate a quieter operation at night, or increased air flow for purges.

The domestic air purifier includes a pre filter which should be changed monthly and a HEPA filter which requires changing every 6 months or annually depending upon its use. Air Filters can be easily removed using a screwdriver.

The Ezee Breathe Domestic Air Purifier is available in two colours, Goose Wing Grey, or Ocean Blue.

Technical

Pre Filter: Grade G2 to EN779
HEPA: Grade H13 to EN1822
